

To lighten the path of those on the run

Worldwide launch app 'Refugee Friend'

9-3-2022

Today the app 'Refugee Friend' has been launched worldwide. This app supports refugees worldwide to easily find addresses of citizens who want to lend them a helping hand. So that their arduous journey can be eased.

A team of app developers and user interface specialists have been working hard on the app in recent times. Due to the crisis in Ukraine, the team has increased its efforts and accelerated the delivery process resulting in this launch.

The initiator was inspired by the good people in Poland, who put green lamps in their windows to tell refugees that they are very welcome and can knock on their door for help. This app is a green light on steroids. After all: most people want to help but often don't know how.

Refugees can search on a map in the app for people, anywhere, who want to help them. Helpers can register and offer 5 categories of help. This includes accommodation, food, sanitation, medical assistance and transport. The help is shown by means of multicolored markers on Google maps. The colors correspond to the different auxiliary types. The refugee can filter on the aid types on the map.

There is also an SOS button. A refugee in acute need can therefore activate all helpers within a radius of 50 kilometers. They may decide to go to the refugee. At the moment the app is still in English. The next version will be multilingual. It will also be made possible that refugees can report abuses in image and sound. So human rights violations can be brought to attention and to justice.

The app can be downloaded in the app store and the play store for iOS and Android smartphones.
